

PowerScan Productivity Suite

Fastest Word-Searchable OCR Software

e-ImageData's **PowerScan Productivity Suite** (PPS) OCR software is revolutionizing the way you work with microfilm. Our PPS OCR software has been leading the marketplace as the fastest and most accurate word-searchable OCR software in the micrographics industry. The software allows researchers, genealogists, librarians and patrons to search for words, link directly to information sources, copy selected areas as text to the clipboard, or convert an entire microfilm image to a word-searchable, archival PDF (PDF/A for long-term preservation) — all with a single click of a live-screen image. There's no need to save your microfilm image first!

Our PowerScan Productivity Suite OCR software with SNAP gives you the following capabilities:

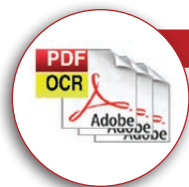

INFO-Link™ To access more information about a topic within your microfilm image, just click the INFO-Link button and the desired word to open a reference source like Wikipedia, a dictionary, or a thesaurus.

WORD-Search™ Click the WORD-Search button and enter a word in the search box to find that word in your microfilm image. Every instance of the word is highlighted.

Copy to Clipboard
Select information on your microfilm image and copy it to the clipboard as text for pasting into any document.

Multi-Page Word-Searchable PDF
Convert any microfilm image to a single-page or multi-page word-searchable PDF with just one click.

The PowerScan Productivity Suite integrates with ABBYY® FineReader OCR software, which consistently is chosen by researchers for its speed and accuracy. The software also utilizes proprietary **Smart Navigation Active Processing (SNAP)** high speed, parallel processing algorithms to give you real-time OCR results. Get information in as little as **ONE second**.

ABBYY

Easy-to-Use, Accurate and Fast

Simply click on a word, term or location, then click the **INFO-Link** button to open a reference source, such as Wikipedia, Google or a database, to find additional information.

The image shows a workflow for finding information. On the left, a document page titled "A Show Will Reveal the Monet of Pencil and Skel..." has the word "Monet" highlighted in yellow. A red circle around "Monet" has an arrow pointing to an "INFO-Link™" button. This button is shown in a separate window with options for "Wikipedia", "Google", and "Dictionary.com". A second arrow points from the "Wikipedia" option to a screenshot of the Wikipedia page for "Claude Monet". The Wikipedia page includes a portrait of Monet, his birth and death dates (14 November 1840 – 5 December 1926), and a brief biography of his work as an Impressionist painter.

See the Speed of the ScanPro with PPS!

OCR Feature	PowerScan Productivity Suite software with SNAP from e-ImageData
INFO-Link (source used Wikipedia)	3 seconds
WORD-Search	2 seconds
Copy-to-Clipboard	5 seconds
Multi-Page Word Searchable PDF 10 pages (16mm film)	12 seconds (1.2 seconds per page)

The PowerScan Productivity Suite is patent-pending and can be added at any time to an e-ImageData ScanPro® 3000, 2200 Plus or i9300 microfilm scanner.

Our PowerScan Productivity Suite OCR software with SNAP gives you ease-of-use, accuracy and speed that's never before been seen in the micrographics industry. *But don't take our word for it!*

"I was looking for new technology and I found it! This is really a great product."
— Heng You, Information Center Manager

"There is an app for everything you want to do with microfilm, I just love it."
— Lori Bessler, Wisconsin Historical Society

"The new WORD-Search option is unbelievable. It will revolutionize the way you work with microfilm"
— Trip Wyckoff, Florida State University
